# Subject Index

**Adhesion**
Fibre
Epoxy resin, 252–255
**Adsorption**
Dynamic mechanical properties
Silica, 380–383
**Ageing**
Temperature dependence
PEEK, 333–340
**Aromatic polymers**
Spectroscopy
Polyester, 388–391

**Bacterial polymer**
Copolyester
Polymerization, 404–406
**Birefringence**
Structure
Polypropylene, 272–274
**Blends**
Brillouin spectroscopy
Molecular motion, 434–437
Conductivity
Fibre, 275–278
Crosslinking
Poly(vinyl chloride), 466–469
Graft
Rubber, 162–164
Hydrogen bonding
Spectroscopy, 152–155
Melting
Oligomers, 137–139
Miscibility
D.s.c., 240–242
Hydrogen bonding, 115–117
LCST, 463–465
Rubber, 366–368
Morphology
Interactions, 177–182
Nuclear magnetic resonance
FTi.r. spectroscopy, 127–129
Miscibility, 86–89
Phase separation
Pressure, 122–123
Poly(methyl methacrylate)
Poly(vinyl acetate), 217–219
Polyethylene
Compatibility, 20–22
Rubber
Dynamic mechanical properties, 118–120
TEM
Diffusion, 332–335
Toughness
Temperature dependence, 95–96
Volume changes
Equation of state, 226–228
**Block copolymers**
Characterization
Synthesis, 286–289
Ionomers
Elastomers, 220–223
Microphase separation
Monte-Carlo calculation, 348–350
Solution
Ultrasound, 314–317
**Branched polymer**
Theta temperature
Polystyrene, 250–251
**Brillouin spectroscopy**
Blends
Molecular motion, 434–437
**Butadiene**
Emulsion polymerization
Isotachophoresis, 61–62

**Catalyst**
Polyacetylene
Spectroscopy, 411–413
**Chain**
Crosslinking
Poly(dimethylsiloxane), 322–324
Diffusion
Model, 358–361
Film
Polymerization, 461–463
Polybutadiene
Small-angle neutron scattering, 99–102
Theta temperature
Viscosity, 35–37
**Chain folding**
Polyethylene
Crystal structure, 455–457
**Chain scission**
Degradation
Solution, 302–304
**Characterization**
Block copolymers
Synthesis, 286–289
Copolymer
Synthesis, 90–92, 355–357
Fibre
Spinning, 212–214
Film
Morphology, 269–272
Polymerization
Polyacetylene, 165–166
Synthesis, 186–189
Solution
Nuclear magnetic resonance, 383–385
Synthesis
Polyurethane, 243–246
Thermal stability
Dielectric behaviour, 237–240
Viscosity
Size exclusion chromatography, 416–417
**Chitosan**
Crosslinking
Membrane, 319–321
Structure
Hydrogen bonding, 267–268
**Compatibility**
Solution
Mixing, 469–471
**Composite**
Deformation
Raman spectroscopy, 47–49
Membrane
Solution, 317–319
Water absorption, 375–377
Polypropylene
Mechanical properties, 201–204
Solution
Liquid crystal, 215–217
**Conduction**
Polythiophene film
Electrical properties, 92–94
Spectroscopy
Polyisoprene, 290–292
**Conductivity**
Electrical properties
Stability, 232–235
Fibre
Blends, 275–278
Polymerization
Synthesis, 198–200
**Conformation**
Nuclear magnetic resonance
Copolymer, 130–132
Orientation
Polystyrene, 261–262
Poly(dimethylsiloxane)
Cyclic polymer, 25–29
Polystyrene
Spectroscopy, 263–265
**Copolyester**
Phase transition
Liquid crystal polymers, 70–74
Polymerization
Bacterial polymer, 404–406
**Copolymer**
Crystallization
Model, 143–145
Dielectric relaxation
Styrene acrylonitrile, 325–329
Film
Synthesis, 414–415
Molecular weight
Rubber, 30–32
Nuclear magnetic resonance
Conformation, 130–132
Polymerization
Initiator, 398–400
Structure
Nuclear magnetic resonance, 329–332
Synthesis
Characterization, 90–92, 355–357
Crosslinking, 77–79
Fluorescence, 402–404
**Copolymerization**
Gels
Swelling, 175–177
Styrene
Methyl methacrylate, 442–444
**Crosslinking**
Blends
Poly(vinyl chloride), 466–469
Chain
Poly(dimethylsiloxane), 322–324
Chitosan
Membrane, 319–321
Crystallization
Network, 182–185
Poly(vinyl chloride)
Tensile strength, 194–197
Polypropylene
Thiourea, 293–296
Synthesis
Copolymer, 77–79
Polyurethane, 448–450
**Crown ether**
Membrane
Poly(vinyl chloride), 223–225
**Crystal growth**
Model
Nucleation, 283–285
Polyethylene
Morphology, 167–169
**Crystal structure**
Polyethylene
Chain folding, 455–457
Dynamics, 304–308
X-ray diffraction, 370–372
**Crystallization**
Crosslinking
Network, 182–185
Kinetics
Plasticization, 146–148
Melting behaviour
Polystyrene, 343–345
Model
Copolymer, 143–145
Morphology
Polybutene, 105–108

Poly(ethylene terephthalate)
Kinetics, 451–452
Polypropylene
Fibre, 391–394
Polystyrene
Polypropylene, 428–430
**Cyclic polymer**
Poly(dimethylsiloxane)
Conformation, 25–29

**Deformation**
Composite
Raman spectroscopy, 47–49
Polyamide
Drawing, 444–447
Swelling
Network, 53–55
**Degradation**
Polystyrene
Solution, 2–5
Solution
Chain scission, 302–304
Thermodynamics
Phase behaviour, 139–143
**Dielectric behaviour**
Thermal stability
Characterization, 237–240
**Dielectric relaxation**
Copolymer
Styrene acrylonitrile, 325–329
**Diffusion**
Model
Chain, 358–361
Nuclear magnetic resonance
Entanglements, 409–411
Rubber, 422–425, 425–427
TEM
Blends, 332–335
**Doping**
Stability
Polyacetylene, 75–77
**Drawing**
Polyamide
Deformation, 444–447
Polyethylene
Morphology, 457–460
**D.s.c.**
Kinetics
Polymerization, 362–365
Liquid crystal polymers
Melting, 372–374
Miscibility
Blends, 240–242
**Dynamic mechanical properties**
Adsorption
Silica, 380–383
Rubber
Blends, 118–120
**Dynamics**
Polyethylene
Crystal structure, 304–308

**Elastomers**
Block copolymers
Ionomers, 220–223
**Electrical properties**
Electrochemical polymerization
Film, 172–175
Polythiophene film
Conduction, 92–94
Stability
Conductivity, 232–235
**Electrochemical polymerization**
Electrical properties
Film, 172–175
**Electrochromic**
Film
Optical properties, 341–342

**Emulsion polymerization**
Butadiene
Isotachophoresis, 61–62
**Epoxy resin**
Fibre
Adhesion, 252–255
Model
Reactions, 265–266

**Fibre**
Adhesion
Epoxy resin, 252–255
Characterization
Spinning, 212–214
Conductivity
Blends, 275–278
Crystallization
Polypropylene, 391–394
Gas permeation
Membrane, 156–159
Kevlar
Tensile strength, 32–35
Molecular weight
Kevlar, 205–208
Polyethylene
Melting, 50–52
Thermal conductivity
Polyethylene, 148–151
**Film**
Chain
Polymerization, 461–463
Characterization
Morphology, 269–272
Copolymer
Synthesis, 414–415
Electrochemical polymerization
Electrical properties, 172–175
Electrochromic
Optical properties, 341–342
Polyamide
Network, 56–57
Polyester
Network, 17–19
Spectroscopy
FTi.r., 279–282
**Fluorescence**
Copolymer
Synthesis, 402–404
**Fluorinated polymer**
Photoreaction
Polyimide, 134–136
**FTi.r.**
Blends
Nuclear magnetic resonance, 127–129
Film
Spectroscopy, 279–282

**Gas permeation**
Fibre
Membrane, 156–159
**Gelation**
Nuclear magnetic resonance
K-carrageenan, 38–40
Polyolefin
Nucleation, 299–301
**Gels**
Copolymerization
Swelling, 175–177
**Glass transition temperature**
Synthesis
Polystyrene, 63–64
Stereochemistry, 351–354
Thermoplastics, 453–454
**Graft**
Blends
Rubber, 162–164

**Hydrogen bonding**
Blends
Spectroscopy, 152–155

Miscibility
Blends, 115–117

**Initiator**
Laser
Kinetics, 418–421
Photopolymerization
Kinetics, 376–379
Polymerization
Copolymer, 398–400
Polyether, 210–212

Characterization, 243–246
Crosslinking, 448–450
Ionomers, 11–15, 15–17
**Potentiometry**
Poly(vinyl chloride)
Membrane, 346–347
**Pressure**
Blends
Phase separation, 122–123
**Processing**
Synthesis
Nylon, 312–313
**Pyrolysis**
Thermal stability
Polycondensation, 229–231

**Raman spectroscopy**
Deformation
Composite, 47–49
Polydiacetylene
Bromine, 22–24
**Rubber**
Blends
Dynamic mechanical properties, 118–120
Graft, 162–164
Miscibility
Blends, 366–368
Molecular weight
Copolymer, 30–32
Nuclear magnetic resonance
Diffusion, 422–425, 425–427

**SALS**
Morphology
Phase transition, 308–312
**SAXS**
Melting
Polyethylene, 298–299
**Shrinkage**
Polypropylene
Spherulite, 96–98
**Side-chain**
Liquid crystal
Nematic phase, 82–85
Synthesis
Polyorganosiloxanes, 65–67
**Silica**
Dynamic mechanical properties
Adsorption, 380–383
**Size exclusion chromatography**
Characterization
Viscosity, 416–417
**Small-angle neutron scattering**
Chain
Polybutadiene, 99–102
**Solution**
Block copolymers
Ultrasound, 314–317
Characterization
Nuclear magnetic resonance, 383–385
Composite
Membrane, 317–319
Degradation
Chain scission, 302–304
Liquid crystal
Composite, 215–217
Mixing
Compatibility, 469–471
Phase separation
Morphology, 5–7
Polystyrene
Degradation, 2–5
**Solution properties**
Mixing
Interaction parameter, 258–260
**Spectroscopy**
Conduction
Polyisoprene, 290–292
Conformation
Polystyrene, 263–265
Film
FTi.r., 279–282
Hydrogen bonding
Blends, 152–155
Polyacetylene
Catalyst, 411–413
Polyester
Aromatic polymers, 388–391
**Spherulite**
Morphology
Polyethylene, 255–258
Polypropylene
Shrinkage, 96–98
**Spinning**
Characterization
Fibre, 212–214
Poly(methyl methacrylate)
Thin film, 124–127
**Stability**
Electrical properties
Conductivity, 232–235
Polyacetylene
Doping, 75–77
**Staining**
TEM
Poly(tetrahydrofuran), 407–408
**Stereochemistry**
Synthesis
Glass transition temperature, 351–354
**Structure**
Chitosan
Hydrogen bonding, 267–268
Copolymer
Nuclear magnetic resonance, 329–332
Polypropylene
Birefringence, 272–274
**Styrene**
Copolymerization
Methyl methacrylate, 442–444
**Styrene acrylonitrile**
Dielectric relaxation
Copolymer, 325–329
**Swelling**
Gels
Copolymerization, 175–177
Network
Deformation, 53–55
**Synthesis**
Block copolymers
Characterization, 286–289
Characterization
Copolymer, 90–92
Polymerization, 186–189
Polyurethane, 243–246
Copolymer
Characterization, 355–357
Crosslinking, 77–79
Fluorescence, 402–404
Film
Copolymer, 414–415
Glass transition temperature
Thermoplastics, 453–454
Nylon
Processing, 312–313
Photoinitiation
Block copolymers, 7–10
Polycarbonate
Thermal properties, 431–433
Polyelectrolyte
Model, 170–172
Polymerization
Conductivity, 198–200
Polystyrene
Glass transition temperature, 63–64
Polyurethane
Crosslinking, 448–450
Ionomers, 11–15, 15–17
Side-chain
Polyorganosiloxanes, 65–67
Stereochemistry
Glass transition temperature, 351–354

**TEM**
Blends
Diffusion, 332–335
Staining
Poly(tetrahydrofuran), 407–408
**Temperature dependence**
Ageing
PEEK, 333–340
Toughness
Blends, 95–96
**Tensile strength**
Kevlar
Fibre, 32–35
**Thermal conductivity**
Polyethylene
Fibre, 148–151
**Thermal properties**
Polycarbonate
Synthesis, 431–433
**Thermal stability**
Dielectric behaviour
Characterization, 237–240
Pyrolysis
Polycondensation, 229–231
**Thermodynamics**
Phase behaviour
Degradation, 139–142
**Thermoplastics**
Synthesis
Glass transition temperature, 453–454
**Theta temperature**
Chain
Viscosity, 35–37
Polystyrene
Branched polymer, 250–251
**Thin film**
Poly(methyl methacrylate)
Spinning, 124–127
**Thiourea**
Crosslinking
Polypropylene, 293–296
**Toughness**
Blends
Temperature dependence, 95–96
**Transition**
Monte-Carlo calculation
Iterative convolution, 45–47

**Ultra-violet radiation**
Photoreaction
Matrix, 108–111
**Ultrasound**
Block copolymers
Solution, 314–317

**Viscosity**
Characterization
Size exclusion chromatography, 416–417
Polyacrylamide
pH, 102–104
Polyelectrolyte
Poly(vinylidene fluoride), 235–236
Theta temperature
Chain, 35–37
**Volume changes**
Blends
Equation of state, 226–228

**Water absorption**
Composite
Membrane, 375–377
**WAXS**
Paraffins
Polyethylene, 190–193

**X-ray diffraction**
Crystal structure
Polyethylene, 370–372
Phase transition
Liquid crystalline polymers, 386–387
**X-ray scattering**
Orientation
Nematic phase, 42–44
